DEDICATION

**SAFE, TRANSPARENT AND ENVIRONMENTALLY JUSTIFIED
DISPOSAL – WASTE MANAGEMENT SERVICES FROM SGS**

INDUSTRIAL WASTE DISPOSAL - ADVICE AND MANAGEMENT

Manufacturing of goods or provision of services can result in residual products or even dangerous waste that you need to transport and dispose of properly. These actions should be completed in a transparent, safe and environmentally hygienic manner to comply with legislation, which is becoming increasingly severe.

SGS CAN HELP YOU

SGS can provide comprehensive waste management services including the collection, sorting, pre-treatment, intermediate storage and reconditioning of dangerous industrial waste products. Our consultants advise you on waste control management, cost reduction and integral waste logistics. Compliance with regulatory requirements surrounding environmental issues is part of our commitment towards the effective protection of the environment.

SGS offers suitable solutions to comply with three requirements:

- Transparency – because together with you we continue to search for ways to reduce or recycle your waste
- Safety – because we strictly comply with all packaging and transport regulations
- Environmentally justified – because we prefer clean processing techniques according to the principle of the “ladder of Lansink”

We provide all clients with a certificate to prove that your waste is being processed in a legal manner. This relieves all administrative concerns, such as transport and safety documents, supply permits, and any declarations of cross-border transport.

Waste management services advantages:

- Advice on alternatives for disposal
- Cross-border waste management
- Disposal of PCB equipment
- Disposal of problem gas bottles
- Intermediary storage in our SGS Environmental Centre
- Pre-treatment of waste
- Waste material characterization

WHY SGS?

SGS is the world's leading inspection, testing, verification and certification company. Our mission is to support our clients in developing sustainable solutions, allowing them to focus on their core business. SGS is accredited as a collector of hazardous waste. We are certified on the basis of the ISO 8288 and ISO 14001 quality standards. SGS is also an active member of the professional federation Febem/Fege and an accredited Trap-I-Pac operator.

SGS is accredited to certify US, EU, Australian and many other local environmental standards including JI, CDM, EU ETS, and voluntary emissions reporting. We offer not only reliable and accountable data, but also an extremely advanced and cost effective certification process. With offices in over 140 countries, most of the time SGS will be closer to your project and more in tune with local standards than anyone else.

The SGS approach is transparent and logical, which is what makes SGS the ideal independent partner to help your business gain a competitive edge. Our experts are hand-selected and trained based on their technical knowledge as well as their business acumen, and like all SGS employees their objectivity, ethics and confidentiality are beyond reproach. Recognized as the global benchmark for quality and integrity, SGS creates leading market solutions to provide true innovation for businesses and individuals alike.
